

Company Profile

ASinteg — smart imaging solutions

ASinteg GmbH is a system integrator and an applications developer in the field of industrial image processing and intelligent image analysis. Our head office is located in Schwerin, Northern Germany.

By using the very latest image processing technologies we are able to create solutions which provide the optimal contribution to the business success of our customers. By combining the expertise, technologies and system components of various manufacturers in the field of industrial image processing, we are able to implement diverse solutions and offer a reliable service. Our solutions are used in logistics, process automation and the security sector.

Our portfolio includes the planning, installation and servicing of post identification systems and sorting systems, as well as the development and implementation of solutions for process automation, quality control and intelligent video surveillance.

We analyse and evaluate the processes of our customers to provide them with efficient solutions to meet their individual needs. In order to fulfil customer requirements, our experienced team uses components from well-known manufacturers and works in accordance with the international safety and quality standards.

Our objective is to provide our customers with complete turnkey solutions. We achieve this by using reliable and successful partners who provide us with technologies and products. Then we concentrate on tailoring those products to meet our customer's requirements perfectly.

Logistics

We offer our consultancy services on matters relating to IT infrastructure, process optimisation and technologies for recording and sorting mailings to companies like express delivery services, postal delivery services, companies with internal mail and mail-order businesses.

Customers benefit from our experience in the field of logistics. With ASinteg, you can be assured of a partner who knows your market and your processes.

ASinteg — smart imaging solutions

What makes our mailings recording and sorting solutions truly superior is their modular and easily upgradeable design, combined with a sophisticated servicing concept. The customer receives a bespoke solution which can be upgraded as requirements change and is therefore guaranteed to offer an optimum of cost-effectiveness.

In addition to planning and implementing post automation systems, we offer a comprehensive service programme with short reaction times for new and existing systems.

Industry

As a specialist in the field of image processing, we offer individual solutions for process automation and operational dependability. Our use of the very latest camera technology and intelligent image analysis guarantees precise measurements, short reaction times and flexible solutions, for instance, in the fields of quality control and status monitoring, and also for counting and measuring tasks.

With reliable and successful partners from the industrial sector, we create sophisticated solutions in accordance with recognized quality standards. Our solutions are characterized by high reliability and a compact, robust design. A comprehensive service programme including regular maintenance avoids costly downtimes and ensures dependable system operation.

Security

We are able to meet the growing need for video-supported surveillance in access areas, entrances and vulnerable locations by offering our customers intelligent cameras and automatic image analysis. Our expertise in the field of camera technology and image analysis makes it possible for us to provide complex and intelligent security solutions, which are not only capable of carrying out surveillance tasks, but are also able to offer access control, entrance control and time recording. Analysis software specially tailored to the respective surveillance tasks ensures skilled management of today's ever-increasing flood of data. This makes it easier to identify relevant results and avoid false alarms. Our use of intelligent cameras minimizes installation and servicing costs and allows flexible utilization and system upgrades.

Traffic

The surveillance of public areas and the recording and measuring of data in flowing traffic places high demands on recording and evaluation technology. As an integrator of mobile solutions for roadway recording, international license plate recognition and measurements taken in video recordings, we use our expertise to create robust and reliable systems. Our solutions are used for automatic traffic surveys, vehicle classification and also for mobile recording of road surface conditions. Our solid service support provides the perfect finishing touches to these outstanding solutions.
